## Properties:

A polymer preparation intended for cleaning and protecting toilets with active protection. Active substances contained in the preparation perfectly remove dirt from the surfaces to be cleaned.

Effectively removes rusty and stone infiltrates, greasy dirt, lime and soap deposits. The modern formula of the preparation has been enriched with polymers that delay the effect of re-deposition of dirt and facilitate the process of subsequent washing. On these surfaces, it leaves a permanent layer of protection. A great advantage of the preparation is the fact that it does not leave any stains or the effect of dried drops of water on the cleaned surfaces. The product gives a delicate shine, leaving a fresh smell.

## Instructions for use:

1. Apply the preparation on the surface to be cleaned.
2. Use a sponge to remove dirt, sediment and infiltrates. Then rinse the preparation with water
3. To protect the surface from re-deposition of contaminants, spray the surface again, wait about 30 seconds, then rinse the preparation with running water and let it dry. There is no need to wipe the surface dry.

## Information & applications

W3 Active Shield
