

Creatables/Craftables and the Wizzard

Always carefully try if the specified combination works on your machine. Experience has shown that what works for one machine, sometimes doesn't for another machine. The thickness (the grammage) of your paper helps in the determination of the different plates. If you use thicker paper (eg. 250 grams) you get a better result in embossing.

Cutting Method

- Use the white base plate as the bottom of the pile.
- Lay on it the Magnetic Spacer Mat.
- Place on these two layers the Creatable / Craftable with the cutting side up.
- Place the piece of paper or cardboard which you want to cut out on it.
- And cover the pile with another white base plate.

Emboss Method

- Again, use as a white base plate.
- Place the Creatable / Craftable with the cut-out of the paper or cardboard still in it with its cutting side up.
- Put the beige embossingmat on it.
- And cover the stack with a white base plate.
